## A SYSTEM FOR AGGREGATING INFORMATION FROM ENTERPRISES OFFERING ITEMS FOR EXCHANGE OVER A COMMUNICATION NETWORK

## Abstract of the Disclosure

A network-based system for aggregating information from a plurality of enterprises offering items for exchange over a network. In one embodiment, the system includes a host computer and a host database. The host computer is in communication with the enterprises over the network, and is adapted for automatedly collecting and analyzing information about the items from enterprise databases associated with each of the enterprises. The host database is in communication with the host computer and is adapted for storing the information collected from the enterprise databases. The host computer is also adapted for providing a host graphical user interface through which a shopper can view, over the network, the information stored in the host database.

According to one preferred embodiment, the plurality of enterprises includes auction sites offering items for purchase over the network.
